Novachips CFexpress is Now RED-Approved

Cine camera giant RED Digital Cinema has given the green light to Novachips CFexpress Type B for its camera use.

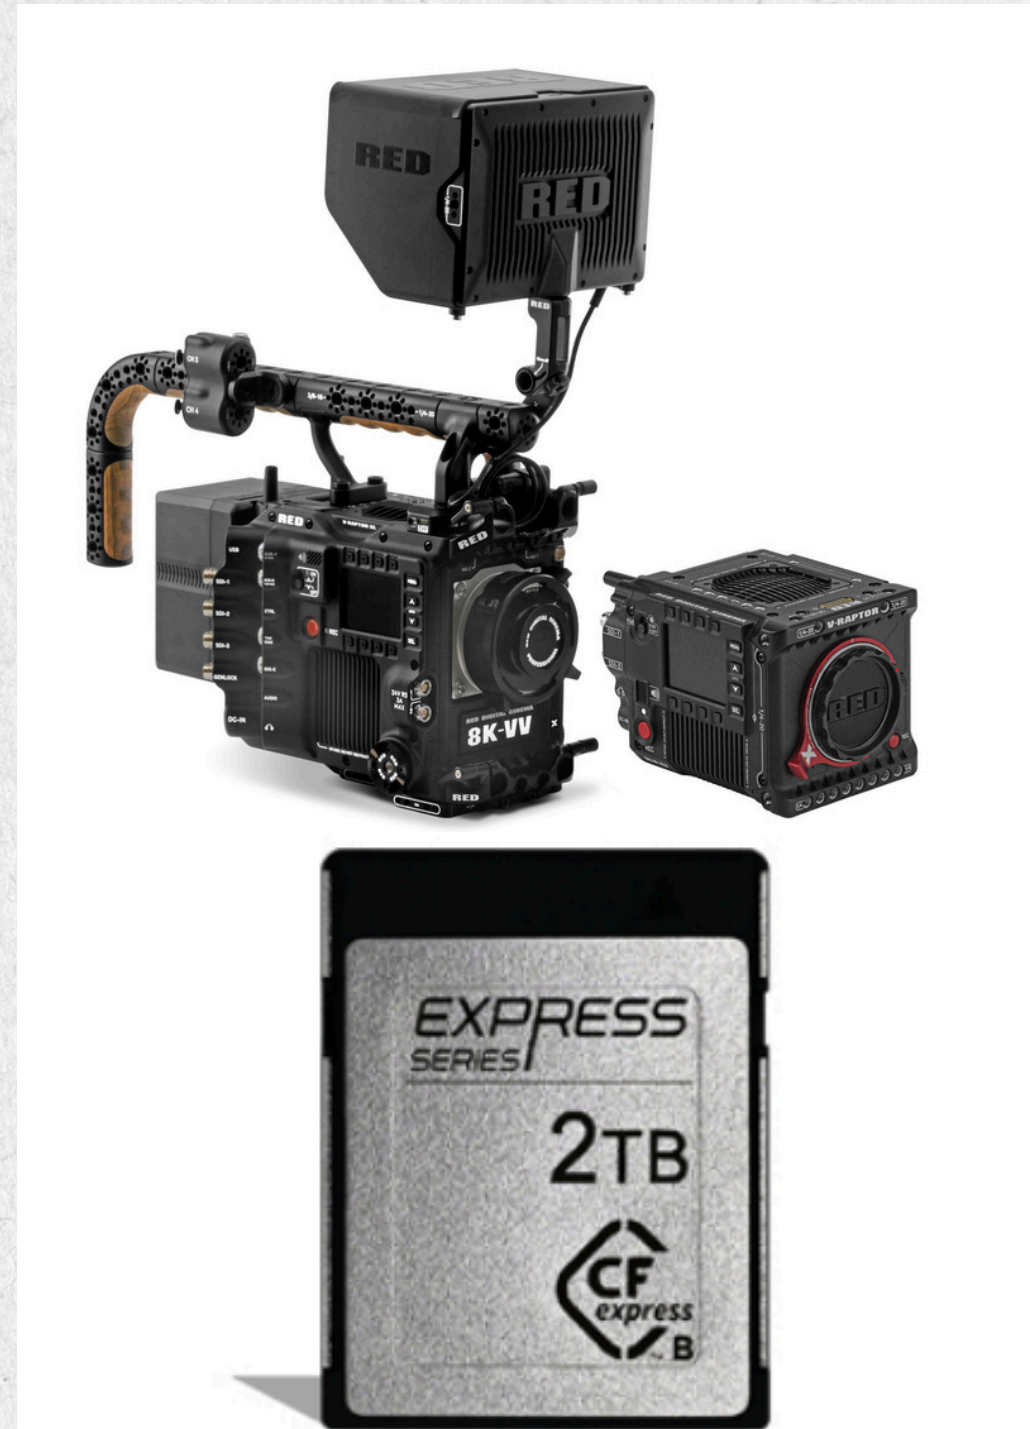

“Sustained Write Speed is All that Matters”

Novachips CFexpress Type B 2TB is now officially approved by RED Digital Cinema.

The Novachips 2TB now works with any RED cameras available.

Upon the official approval, RED has released a firmware update thereby assuring compatibility with its cameras.

**RED
APPROVED**

Presently there are 3 RED cameras that supports the Novachips 2TB: Komodo X, V-Raptor, and V-Raptor XL.

“The flagship V-Raptor XL puts out a bitrate of 850MB/s at max, our CFexpress Type B has a minimum sustained write speed of 1,000MB/s, which what all matters in the video camera realm.” said a Novachips spokesman.

The Novachips 2TB also comes in 256GB, 512GB, 1TB capacities. However, the 2TB is currently the only capacity that RED cameras support according to its firmware.

“We are in no rush, soon a 4TB, with faster speed will be on offer to handle larger footage and faster offloading.”
